

# Intune Managed App Badging System

## Intune Managed App Badging System

Guidelines for producing integrated “Badge” (icon overlay or corner banner) on icons and icon tiles to indicate your app is being managed with Intune.

# Guidelines

## Product icon badging for Intune managed applications

Depending on the platform and UI location you are working in you may need to create a free-standing icon and/or an icon placed within a background rectangle (tile).

### Product logo Intune “managed” icon overlay

- For use when delivering free-standing icons (no background “tile”)
- Use the provided overlay icon in the assets folder <free-standing\_overlay.ai or .eps>
- Change the color background/outline on the managed overlay icon to a matching color on the product logo and place over your product icon at the lower right corner as shown in the examples. **Briefcase icon color must remain white.**
- The overlay icon should be about 50% of the height of your icon.

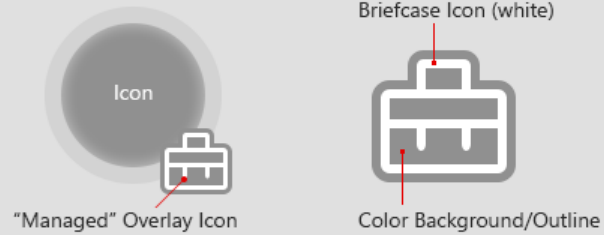

### Product icons on tiles

- To create an icon on a tile, begin with one of the provided tile templates in the assets folder.
- Scale your icon to fit approximately centered on the provided square shape. Icon should be about 50% of the size of the square.
- Choose an appropriate fill color for the tile and the corner banner.
  - Suggested: use the corner banner with 25% opacity black to contrast your selected tile fill color.
- Make sure the briefcase icon stays in the *exact position* on the corner banner as provided (in part to accommodate Mac/iOS rounded corners). **Briefcase icon color must remain white.**
